

For over 80 years, May Gurney has been successfully supplying specialist geotechnical expertise to the construction industry. Our aim is to deliver a safe professional service which is cost effective and innovative.

SLOPE STABILITY

SLOPE STABILITY

Many construction schemes involve the design and engineering of slope stability solutions. We offer a complete design and construct package.

We have countrywide experience in slope stabilisation for rail, highways and waterways clients, local authorities and developers.

Our Site Investigation section can define the design parameters and locate slip planes using boreholes, window sampling, probes and state of the art down hole instrumentation and monitoring equipment.

Our designers can choose from May Gurney's range of geotechnical techniques to ensure the most cost effective solution.

Geotechnical techniques offered:

- Bored pile retaining walls
- Soil nailing
- Ground anchors
- Geogrid
- Pressure relief wells
- Gabions
- Reinforced earth
- Site Investigation
